```
<p>A paragraph tag is used to wrap a multi-line body of text</p>

<h1>A heading1 tag is used to denote the largest title on the page</l
```

N.B. The `<h1>` tag is used in site ranking algorithms by search engines such as Google. It is important to only have one `<h1>` element per page and to have it contain a keyword summarizing the page content.

```
<h2>Used for titles with a smaller font size than h1</h2>
```

These heading tags should be used in descending order with regards to their containing font sizes. The smallest size is a:

```
<h6>Heading six tag</h6>
```

Lists

Lists are used to contain a series of list elements. These may be ordered or unordered but must contain at least one element. There are three different types of HTML list tags. The following is an example of the first, most common type, the unordered list.

```
<ul>
    <li>Unordered List</li>
    <li>Ordered List</li>
    <li>Definition List</li>
</ul>
```
